## GLADSTONE HARBOUR OVERVIEW

### Summary of 2025

- There was a high level of tagging activity in the Gladstone area with a further 1823 fish tagged and 85 recaptures keeping the confidence level in the data high.
- The Boyne Tannum Hook Up (BTHU) competition held in May this year continued to provide additional useful data.

Gladstone Harbour is mostly a local fishery with 85% of recaptures reported by locals. Visiting fishers mostly come from Rockhampton, Central and SE Qld with low numbers from interstate, mostly from NSW and Victoria. Tagging and recaptures occur throughout the year with increased activity around May-Jun around the time of the BTHU competition. Fish tagged during the BTHU competition result in a boost in recaptured in May-Jun.

Around 39% of tagger fishing days were on the weekend while for those recapturing fish 48% were reported from the weekend.

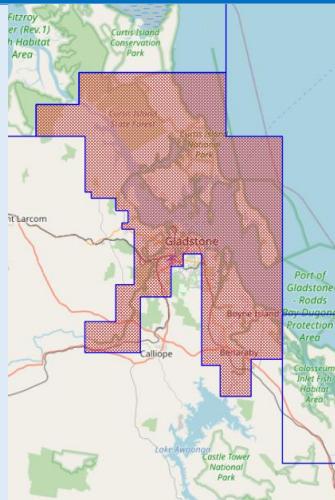

While Barramundi are a key species they are not as prolific as further north. Barramundi become a prime target when Lake Awoonga spills releasing fish from the lake. When that happens fishing for the species increases, particularly in the Boyne River. Following the spill in 2017 in the next 2 years fish tagged in the lake were recaptures in the Boyne River up to 10km below the dam with just 1 fish recaptured further away south along the coast. Since then, there have been few Barramundi tagged or recaptured in the Boyne River.

The lake has not spilled since 2017 and there has not been any significant natural recruitment so that Barramundi numbers have gradually fallen to low levels reflected in lower activity, a fall in the numbers tagged, a lower catch rate, and a fall in the commercial catch.

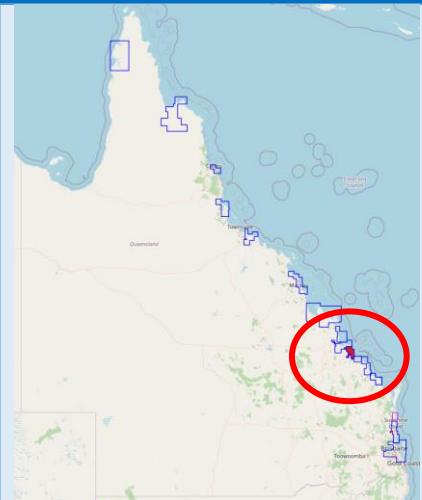

Mangrove Jack and Bream are other key species although in the last few years there has been an increase in the numbers of Barred Javelin (Grunter) tagged. Flathead are another species targeted by taggers but to a lesser extent.

Based on recaptures of legal fish by recreational fishers (other than taggers) the level of harvest of the key species is around 50% for Barramundi, Mangrove Jack and Bream however is higher at around 90% for Barred Javelin (however numbers are low). The area is a mix of a harvest and experiential fishery although there has been an increase in the release rate of legal fish. This is supported by the continuing increase of live fish (all legal) presented at the live weigh-in at the BTHU and boat ramp surveys during the competition up to 2019 which showed a steady decline in the kept fish catch rate.

## Data sources

Data used in the Gladstone Crystal Bowl are:

- Tag records and recapture records at <http://crystalbowl.infofishaustralia.com.au/>.
- Boyne Tannum Hook Up competition records at <http://crystalbowl.infofishaustralia.com.au/>.
- Calliope River flows from Castlehope Station 132001A at <https://water-monitoring.information.qld.gov.au/>.
- Gladstone rainfall from Gladstone Airport station 039326 from <http://www.bom.gov.au/climate/data/index.shtml>
- Awoonga Dam level data provided by Gladstone Area Water Board.

## Basis for analysis

- Data reliability for fishers based on the sample size over the past 5 years for days fished by taggers and by fishers recapturing fish.
- Data reliability for fish based on average number of fish tagged and recaptured per year over the past 5 years.
- Catch rates calculated as number of fish tagged/day for T20 fishers (taggers) with a minimum of 12 fisher days (at least 1 per month) to provide a reliable catch rate.
- Recapture rates relate to fish tagged in a particular year.
- Growth calculated using logarithmic curve from recaptures where fish were out for 90 days or more and had positive growth.
- Survival rates are calculated based on a model that uses the reduction in the numbers of recaptures each year after tagging.
- Movement distances calculated as the shortest distance by water from the tag to recapture location using Google Earth.
- Proxy travel distance from the recapture fisher's home (address, suburb, city or postcode) to the recapture location is the straight-line distance between locations based on Google Earth coordinates with local <60km, intrastate >=60km and Qld postcodes, and interstate postcodes other than Qld.
- Gender based on names of recapture fishers excluding taggers.
